

## Chapter 24 Article writing

Write an article on importance of planting trees

The importance of planting trees are very important at the 21st century. Trees are very important for us as food and water. They are what keep human life alive and it is no wonder then that our ancestors were nature worshippers. It is only much later and is a matter of great regret, that humans began to disrespect and exploit nature for their greed.

clean air is the need of the hour in most cities today, especially in the metropolitans, pollution is a scare which all city dwellers deal with on a day-to-day basis. Global warming is becoming a threat to the future of the planet. Planting and conserving trees is the only alternative which our world has today. All of us must get together on this so as to conserve our planet for the future generations.

## COMPREHENSION II ENGLISH 1ST

PAGE 111 TO 112

Q A how do animals deal with the lack of food during winter?

Ans. During winters, most animals deal with the lack of food by hibernating.

Q B. How do hibernating animals prepare for winter?

Ans. Hibernating animals prepare for winter by eating more food than they need. They store food as body fat.

Q C. What do animals, which do not have any means to stay warm in winter season do?

Ans. Animals who do not have any means to stay warm during winter take shelter under logs, stones and piles of dry leaves. They move

downwards to the bottom of lakes and ponds. Some even burrow in the mud to avoid the cold winter.

Q D. Do animals wake up during hibernation? What do they do then?

ans Certain animals might wake up during hibernation and shiver in order to warm themselves.
